## **McCloud seeks bottling grant**

*By Michael Le Guellec*

The McCloud Community Service District board of directors authorized Great Northern Corporation to actively pursue the investigation of economic development grants for the Nestle McCloud project.

The supporting documentation given out as part of the agenda at the February 9th meeting says the grant funds would be sought to assist in the evaluation and development of the project.

The data suggest that the cost will be most likely very high, considering the number of pipelines, environmental reviews, roads improvements and other factors needed to facilitate the project.

"If anyone can find money to make the McCloud Arrowhead factory a reality, it is Great Western," the documentation states.
